

Economical and modular fire protection solution

Fireking CAS FK fire extinguishing systems fight fires using FK-5-1-12. This extinguishing agent is particularly suitable for the protection of spaces with electronic and electrical equipment and offers an economic and modular fire protection solution.

Dependable Hardware

Fireking CAS FK uses approved hardware, which has proven its dependability in thousands of installations and hundreds of releases.

Made in Europe

In our manufacturing facility in Italy, the cylinders are assembled and filled in a process which is UL and FM compliant and periodically inspected by UL and FM.

Accurate calculation

The software to calculate the Fireking CAS FK system is easy to use. Systems can be designed to well-known standards. It also provides information about evaporation distances and is able to calculate selector valve manifolds for multi-zone systems.

Economic configuration

With 50 bar technology, it is possible to set up one multi-zone system instead of several single-zone systems. Multi-zone systems make use of a common, single stock of extinguishing agent for all rooms while, in the case of single-zone systems, a separate storage facility must be provided for each room. As such, multi-zone systems reduce costs and save space. This is particularly important if several rooms of a similar dimension have to be protected in a building.

SPECIFICATIONS

Brand:	FIREKING 
System:	Fireking CAS FK
Production approvals:	UL, FM, VdS, CE compliant
Working pressure:	25, 42 & 50 bar
Cylinder sizes:	22, 40, 80, 140 & 180 l
Configuration:	Single-zone Multi-zone - up to 15 rooms protected by one set of cylinders

Trusted above all.
